I am well versed in HTML, Bootstrap, Figma, JS, and Excel. Also skilled in design and use of color theory.

Class Schedule

I have experience creating a webpage for my schedule of classes, complete with links, using HTML and CSS. The page has working links and images for each scheduled item.

Study Buddy

I have used Bootstrap to create a homepage for StudyBuddy, an application used to find study partners for classes. The webpage has working buttons and images, and even uses a carousel to convey information.

HeartBeat

I have used knowledge of Figma to prototype a health app for iPhone 8 that would monitor various health statistics and act as a form of social media between users.

UC San Diego / COGS3

FALL 2022

This introduction to computing class taught the basics of HTML, CSS, JS, Bootstrap, and many other useful programs.

This class consisted of several assignments that used various languages and programs. Besides those listed in experience, I had the opportunity to craft a Wedding Tables program using JS that divided some number of people amongst a number of tables as evenly as possible. There was a design critique assignment using color theory, and more.
